Commands to run three files

To run any code, go to the sub-directory where the code is located using "cd" command or open the terminal in that sub-directory.

Scala:

- To run scala, use the following command:
```
scala handcoded.scala
```

Spark:

- To run Spark, use the following command:
```
spark-shell -i /Users/muskansinghal/Desktop/
DISML_Assignment_8/part2-spark/multiply.scala
```

- Once the scala command prompts open, type the following command:
```
Multiply.main(null)
```

Breeze:

To run breeze, use the following command:
```
sbt update          //creates two folders: project and target)
sbt compile
sbt run
```
